

# AUTOMATE YOUR BUSINESS CONTINUITY PROGRAMME

Highly adaptive business continuity, enterprise risk and organisational resilience software applications.

Inoni Pro is a business continuity software platform that provides savings through automation, measurement and consistency. It allows organisations to build comprehensive, practical and standards-aligned business continuity plans and associated tools. It provides features for workflow and updating as required under a dedicated and secure company account, hosted by Inoni or from your own premises.

Highly adaptable

Access plans from  
any location

Design bespoke  
applications

Use bespoke  
measurements

Customised  
hosting options

Offset license fee

Inoni is delivered with a comprehensive suite of business continuity-related tools and materials that you can start to use immediately. It offers a unique ability to customise and configure, allowing your system to adapt, evolve and constantly improve. This means your BC management system can keep pace with change. It's never a straitjacket and always fits the business.

## *Setup*

Inoni supports the customer in completion of the Setup tool to initially scale and configure the BCM toolset. This is accessible via the client manager login and allows import of any pre-existing location, department, application and other relevant databases.

## *Business Impact Analysis*

Captures per-process information via customisable online questionnaires that can be completed by or on behalf of business unit managers. These collect impact, timeframe, dependency and risk information, covering quantified and intangible variables. The BIA delivers customisable professional change-controlled reports online and to PDF and MS Word with updating graphs and charts.

## *Continuity Planning*

Captures and supports analysis of all plan-related information via customisable online questionnaires. This includes data to drive all aspects of emergency or incident response, prioritisation decision support, relocation and resource allocation, objective setting and action plans, plus detailed contact lists. BCP delivers plans to MS Word, online and to smart phone.

## *Add-ins*

A range of customisation options and function add-ins are available, including enterprise risk assessment, crisis and incident management, ICT DR and Supply Chain due diligence, plus bespoke tools.

# Functionality
