

BUSINESS CONTINUITY FOR MID-TO-LARGE ORGANISATIONS

Our Inoni Pro consulting service features light-touch business interaction and delivery by experts, whilst leaving you in complete control.

We understand how challenging Business Continuity Planning can be for mid-to-large scale organisations. Customers, insurers and sometimes regulators increasingly demand evidence of a high quality and reliable programme, but your business is of a size and complexity that makes this a challenging prospect. Even if you succeed in creating a full set of documentation, the inherent rate of environmental and organisational change risks it becoming outdated and potentially unworkable long before the next scheduled review. And in addition, they want evidence of testing and true capability. Ideally you'd assign a dedicated Business Continuity team to do all this, but budgets are tight and it becomes someone's part-time job.

Inoni Pro is a flexible and innovative solution that takes your business continuity programme to a best practice position and keeps it there. Its unique facilitation service offers convenience, compliance, consistency and creativity, combining professional expertise and automation to get the best for your organisation. It features light-touch interaction and delivery by experts, whilst leaving you in complete control - you only pay for what you need, when you need it. It offers an affordable, low-risk alternative to a full in-house BCM department with the added benefit of software-accelerated implementation.

Our service will

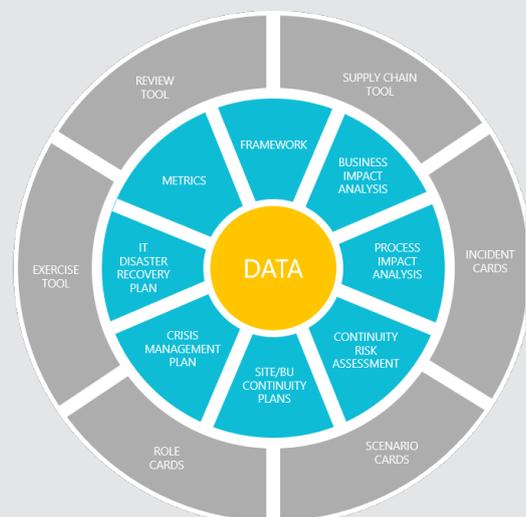

- (a) Establish BC in your organisation*
- (b) Create or renovate your BC Management System*
- (c) Refresh and automate your BC documentation*
- (d) Maintain and continually improve your BC capability*
- (e) Provide responsive expert support*

Review First, we review your current capability and establish your requirements. This includes defining and allocating roles to individuals, reviewing BC Policy and adapting your BC Management System so it satisfies policy and organisation requirements.

Build Next, we design and deliver your BC programme. This includes performing business impact analysis, assessing continuity risks and developing response plans at site, department and organisation levels. All data is configured and entered via our online toolset so it delivers a sustainable business continuity management system and baseline capability.

Improve Finally, we work on maintaining and continually improving your capability, documentation and control. This is achieved through measurement and audit, workshops and walk-throughs, training and awareness raising and updating the BCMS.

Inoni Pro delivers a comprehensive set of documentation and online tools that support the full BCM Lifecycle

Approach

Inoni are specialist Business Continuity providers, providing continuity plans and supporting analysis, training and exercising delivered consistently via our straightforward methodology and configurable software platform. We shape and populate the software using information we collect by sharing the methodology with you. This approach means we achieve a shared consistent understanding, allowing you to take meaningful steps toward creating a resilient culture.

Expert Consultancy

Inoni is a specialist Business Continuity consulting provider, delivering best-practice continuity plans and all related analysis, training and exercising, all supported by a straightforward methodology and highly configurable software platform.

Our approach is risk-based and reflects reality. It uses a model that represents the organisation as a collection of interrelated risk assets or entities. These are defined at a level that satisfies the organisation's risk management objectives. The model then allows us to simulate continuity risks, exploring their effects before planning a response.

Our methodology offers a better, more practical way of doing business continuity, aligned with recognised best practice (ISO 22301) and delivering quality assured outcomes.

Powerful Software

The Inoni Pro software provides savings through automation, measurement and consistency.

It allows organisations to build comprehensive, practical and standards-aligned business continuity plans and associated tools. It provides features for workflow and updating as required under a dedicated and secure company account, hosted by Inoni or from your own premises.

The software offers a unique ability to customise and configure, allowing your system to adapt, evolve and constantly improve. This means your BC management system can keep pace with change. It's never a straitjacket and always fits the business.

The Result: A Best-Practice BCMS

The Inoni Pro programme delivers a best-practice BCMS with the following characteristics

- Driven and guided by the organisation's business governance and operational requirements.
- Represented by and answerable to a Steering Group (BCSG) and formal Sponsor.
- Organised into response teams according to type and level of threat or incident
- Implemented and maintained by business owners designated by area of responsibility.
- Supporting compliance with International best practice (ISO 22301) and organisation internal risk principles.
- Focused on practical necessity.
